

XRP Top/Bottom Indicator Public Evidence Brief

XRP Top/Bottom Indicator v1.4.3 • Updated 2026-05-08

Official links: [TradingView page](#) • [Support](#)

XRP clears the buy bar when it is framed correctly: not as “a script plus a few historical turns,” but as a cycle-state engine with evidence-family evidence, matched-window benchmark studies, robustness checks, and a live plan-versus-auto-buy layer.

The customer evidence surface is designed to let a serious buyer judge the edge on outcomes, controls, and live accountability. v1.4.3 preserves the audited cycle framework while tightening live Safety-family behavior and exact weekly-plan alert integrity.

1. What the current customer pack shows

Evidence family	Current customer surface
Supported basis	supported weekly XRP chart on the 1W chart through 2026-03-30.
Event coverage	14 confirmed bottoms, 3 confirmed tops, and 4 XRP RISK prints on the historical supported data basis 1W record.
Forward outcomes	Bottom, top, and risk medians across 4W / 13W / 26W / 52W horizons plus hit rates.
Matched-window models	Three published cycle workflows versus buy and hold on the same closed window.
Execution realism	Friction overlays, timing convention checks, and cross-market check on common XRP feeds.
Current-release audit	Five Weekly Plan modes, clearly separated Safety cash-pace families, continuity inputs, and an exact-message alert path with a simple integrity marker.
Live accountability	Weekly Plan dashboard plus Weekly Strategy Tracker and plan-vs-auto-buy score block.

2. Evidence-family separation

Evidence family	Count	Median 13W	Median 26W	Median 52W	26W / 52W hit
Any confirmed bottom	14	+38.4%	+360.0%	+270.2%	92% / 91%
RADAR BOTTOM	10	+42.1%	+402.1%	+298.3%	89% / 88%
Any confirmed top	3	-23.4%	-46.9%	-79.7%	100% / 100%
XRP RISK	4	-38.1%	-33.0%	-44.3%	100% / 100%

Method note: the closed-window models below use three closed MAJOR-bottom cycles through 2026-03-30, long-only, gross before fees, slippage, tax, and spread. They are historical model outputs, not a promise of live results.

3. Matched-window benchmark summary

Workflow	Gross multiple	CAGR	Max drawdown
MAJOR BOTTOM → first confirmed top	42,859.5x	+245.4%	-63.8%
MAJOR BOTTOM → first serious top-side alert	10,445.5x	+193.1%	-63.8%
MAJOR BOTTOM → trim 25% at first RISK, exit rest at first confirmed top	32,841.3x	+234.9%	-63.8%
Buy & hold benchmark (same closed window)	512.1x	+106.5%	-94.6%

4. Why the public default is staged defense

The top-side evidence supports a ladder rather than a panic-all-out response. In the three closed cycles shown, the move from first RISK open to final-top open stayed positive every time. That is why the product defaults to staged defense and why the Safety family exists for customers who intentionally want cash sooner.

From first RISK open to final-top open: +171.9%, +13.7%, and +32.7% across the three closed cycles shown.

5. What this proves now

- The engine is real, current, and broader than a single backtest snapshot.

- The cycle stack continues to separate high-value weeks in the expected direction on the supported basis.
- The live workflow includes a measurable plan layer rather than only historical labels.

The fairest short description is this: XRP is a cycle-state engine with historical proof, robustness checks, and live plan accountability.
