

## XRP Top/Bottom Indicator

## Weekly Close Checklist

Version v1.1.0

### Use at the close

The job at weekly close is not to predict. It is to compare what printed with what your written playbook already says to do.

### Chart and data health

|                          | Checklist item   |
|--------------------------|--|
| <input type="checkbox"/> | XRP chart is BITSTAMP:XRPUSD on 1W and using regular candles.          |
| <input type="checkbox"/> | The indicator is loaded with the intended settings.                    |
| <input type="checkbox"/> | No persistent health banner or degraded-data warning is being ignored. |
| <input type="checkbox"/> | Alerts are still active and tied to named conditions.                  |

### Signal review

|                          | Checklist item  |
|--------------------------|---|
| <input type="checkbox"/> | Any new MAJOR, RADAR, RISK, or LIGHT output this week has been noted.               |
| <input type="checkbox"/> | I know whether the output is confirmation, caution, or optional context only.       |
| <input type="checkbox"/> | I am following the written playbook instead of improvising around emotions or news. |

## Execution discipline

|                          | Checklist item   |
|--------------------------|--|
| <input type="checkbox"/> | Position size remains inside the plan.   |
| <input type="checkbox"/> | Any trim, add, or hold decision is spot-first unless I deliberately accept higher-structure risks elsewhere. |
| <input type="checkbox"/> | Orders, screenshots, and journal notes are updated.  |

## Reset for next week

|                          | Checklist item  |
|--------------------------|---|
| <input type="checkbox"/> | Top-side and bottom-side alerts are still live.             |
| <input type="checkbox"/> | Reserve cash, add rules, and trim ladder are still defined. |
| <input type="checkbox"/> | Security, custody, and tax notes remain current.            |

### What to avoid

Do not change settings in the middle of a live decision unless you are willing to recreate the live alerts and re-evaluate the historical context under the new settings. Do not force action when the weekly output is only telling you to wait or when the chart is not on BITSTAMP:XRPUSD.
